

Durst Adds Low Cost Solution for Engine Driven Pumps

November 2, 2009 (Shopiere, WI): – Durst has released a new Zero Offset Direct Drive (ZODD), especially designed as a low cost solution for engine driven pumps. This newest generation ZODD features a simple two-piece design for easier installation and a lower profile for tight applications where space is a premium.

These drives, which meet SAE standards, are adaptable to a variety of construction, agricultural, specialty vehicle, aerial work platform, forestry, marine and oil field applications. They are particularly suited to applications where cost and space are key considerations.

For further details on this newly released Zero Offset Direct Drive or other Durst products, please visit <http://www.durstusa.com/new/zodd.html> or email: durstinfo@regalbeloit.com.

About Durst:

Durst, a Regal Beloit Company headquartered in Shopiere, Wisconsin, has one of the most comprehensive mechanical power transmission product offerings for off-highway, agriculture and material handling equipment available in North America. Durst industrial products are used in a variety of unique applications, such as hydraulic pump drives for cranes, pavers and trenchers as well as transfer cases for telescopic all-terrain forklift vehicles and cement mixers.

About Regal Beloit:

Regal Beloit Corporation is a leading manufacturer of mechanical and electrical motion control and power generation products serving markets throughout the world. Regal Beloit is headquartered in Beloit, Wisconsin, and has manufacturing, sales, and service facilities throughout the United States, Canada, Mexico, Europe and Asia.
